

TOKYO, TOKYO, TOKYO, TOKYO

What is claimed is:

1. A printing quality inspection apparatus,  
comprising:

inspection means for inspecting the printing  
quality of printed sheet-like object; and

inspection moving means for moving said  
inspection means between a working position for  
inspecting a printing quality of the printed  
sheet-like object and a maintenance position for  
maintaining said inspection means.

2. A printing quality inspection apparatus  
comprising:

correcting means for correcting the position  
of printed sheet-like object;

inspection means disposed inside a frame for  
inspecting a printing quality of the sheet-like  
object corrected of position by said correcting  
means; and

moving means for moving at least one of said  
correcting means and said inspection means to a  
maintenance position for maintaining.

3. The printing quality inspection apparatus  
of claim 2,

wherein said moving means is inspection

moving means for moving said inspection means between said working position for inspecting the printing quality of printed sheet-like object and said maintenance position.

4. The printing quality inspection apparatus of claim 3,

wherein the working position is inside said frame and said maintenance position is outside said frame.

5. The printing quality inspection apparatus of claim 3,

wherein said inspection moving means includes a rotatably provided support roller, and a guide for guiding between said working position and said maintenance position of said inspection means.

6. The printing quality inspection apparatus of claim 5,

wherein said support roller is rotatably disposed at an inspection means side, and said guide is a support rail for supporting said support roller, and connecting between said working position and said maintenance position of said inspection means.

Sul Aile*

7. The printing quality inspection apparatus of claim 6,

wherein said support rail includes a first support rail provided inside the frame for supporting said support roller, and a second support rail movably provided to be positioned on an extension of said first support rail.

8. The printing quality inspection apparatus of claim 7,

wherein said second support rail is swing pivotally provided so as to move between a guide position positioned on the extension of said first rail and a retreat position for retreating from said guide position.

9. The printing quality inspection apparatus of claim 6, further comprising:

a restricting rail for restricting movement of said support roller in a direction orthogonal to the running direction of said support roller.

10. The printing quality inspection apparatus of claim 6, further comprising:

inspection positioning fixing means for positioning and fixing said inspection means such

that said inspection means may be positioned at the working position.

11. The printing quality inspection apparatus of claim 2,

wherein said moving means is corrector moving means for moving said correcting means between said working position for inspecting the position of printed sheet-like object and said maintenance position.

12. The printing quality inspection apparatus of claim 11,

wherein said corrector moving means includes a roller provided at said correcting means side, and a guide provided inside of said frame for guiding the moving of said correcting means.

13. The printing quality inspection apparatus of claim 12, further comprising:

a support roller provided at one of said frame side and said correcting means side, and rotatable along the moving direction of said correcting means; and

a support rail provided at the other of said frame side and said correcting means side, said support rail being engaged with said support roller

00066661-000104

for defining a deviation of said correcting means  
in a direction orthogonal to the moving direction  
of said correcting means.

Cont  
Sub 9/16  
of

116 14. The printing quality inspection apparatus  
of claim 13, further comprising:

corrector positioning fixing means for  
positioning and fixing said correcting means such  
that said correcting means may be positioned at the  
working position.

15. The printing quality inspection apparatus  
of claim 2.

wherein said maintenance position includes a inspection means maintenance position for maintaining said inspection means, and a correcting means maintenance position for maintaining said correcting means, and said moving means includes corrector moving means for moving said correcting means between said correcting position for correcting said position of printed sheet-like object and said correcting means maintenance position, and inspection moving means for moving said inspection means between said inspecting position for inspecting the printing quality of print d sh et-like object and th inspection means maint nance position.

16. The printing quality inspection apparatus  
of claim 15,  
wherein a moving direction of said inspection  
means by said inspection moving means and the  
moving direction of said correcting means by said  
corrector moving means are different.
